

Drinking Water Quality and Compliance 2009 Annual Notice to Consumers Town of Assiniboia

Introduction

Saskatchewan Ministry of Environment requires that at least once each year waterworks owners provide notification to consumers of the quality of water produced and supplied as well as information on the performance of the waterworks in submitting samples as required by a Minister's Order or Permit to Operate a waterworks. The following is a summary of the Town of Assiniboia water quality and sample submission compliance record for 2009. This report was completed on March 23, 2010. Readers should refer to Environment's Municipal Drinking Water Quality Monitoring Guidelines, November 2002, EPB 202 for more information on minimum sample submission requirements and the meaning of type of sample. Permit requirements for a specific waterworks may require more sampling than outlined in the department's monitoring guidelines. If consumers need more information on the nature and significance of specific water tests, for example, "what is the significance of Selenium in a water supply", more detailed information is available from: http://www.hc-sc.gc.ca/ewh-semt/pubs/water-eau/index e.html .

Water Quality Standards Bacteriological Quality

Parameter/Location	Limit	Regular Samples Required	Regular Samples Submitted	# of Positive Regular Submitted (%)	
Total Coliform and	0 Organisms/100 mL	72	77	0%	
Background Bacteria	Less than 200/100 mL				

Water Disinfection -

Chlorine Residual in Distribution System for Test Results Submitted with Bacteriological Samples							
Parameter	Minimum Limit	Total Chlorine Residual Range	Free Chlorine Residual Range		# Tests Submitted	# Adequate Chlorine (%)	
Chlorine Residual	0.1 mg/L free OR 0.5 mg/L total	0.21- 5.25	0.16 - 2.42	72	89	100%	

Water Disinfection - Free Chlorine Residual for Water Entering Distribution System from Waterworks Records-From Water Treatment Plant Records

Parameter	Limit (mg/L)	Test Level Range	# Tests Performed	# Tests Not Meeting Requirements	
Free Chlorine Residual	at least 0.1	0.20 - 2.80	26E	0	

a minimum of 0.1 milligrams per litre (mg/L) free chlorine residual is required for water entering the distribution system. Tests are normally performed on a daily basis by the waterworks operator and are to be recorded in operation records. This data includes the number of free chlorine residual tests performed, the overall range of free chlorine residual (highest and lowest recorded values) and the number of tests and percentage of results not meeting the minimum requirement of 0.1 mg/L free chlorine residual.

Turbidity - From Water Treatment Plant Records

Parameter	Limit	Test Level	# Tests Not Meeting	Maximum	# Tests	# Tests
	(NTU)	Range	Requirements	Turbidity (NTU)	Required	Performed
Turbidity	1.00	0.12 - 2.49	21	2.49	365	365

Chemical - Health Category

All waterworks serving less than 5000 persons are required to submit water samples for SE's Chemical Health category once every 2 years. The Chemical Health category includes analysis for arsenic, barium, boron, cadmium, chromium, fluoride, lead, nitrate, selenium and uranium.

The last sample for Chemical Health analysis was submitted on July 22 2009. Sample results indicated that the provincial drinking water quality standards were not exceeded. The next sample will be sent in July 2010.

Chemical - Trihalomethanes (THMs)

Parameter THMs Sample # Samples # Samples Limit (mg/L) Result (average) Required Submitted

Trihalomethanes

4

General Chemical

	Aesthetic	Sample Results	# Samples	# Samples
Parameter	Objectives * (mg/L)	(average)	Required	Submitted
Alkalinity	500	375.4	4	4
Bicarbonate	No Objective	458	4	4
Calcium	No Objective	53.6	4	4
Carbonate	No Objective	0	4	4
Chloride	250	66.18	4	4
Conductivity	No Objective	2819.2	4	4
Hardness	800	421.4	4	4
Magnesium	200	69.8	4	4
PH	No Objective	7.8	4	4
Sodium	300	535.4	4	4
Sulphate Total dissolved	500	1072.8	4	4
Solids	1500	2274	4	4

All waterworks serving less than 5000 persons are required to submit water samples for SE's General Chemical category once per three months every second year if a surface water or blended surface/groundwater source. The General Chemical category includes analysis for alkalinity, bicarbonate, calcium, carbonate, chloride, conductivity, hardness (as CaCO₃), magnesium, sodium, sulphate and total dissolved solids.

The last sets of quarterly samples for General Chemical analysis were required in 2009 and were submitted on March 9th, June 1st, August 11th and November 23rd. Samples exceeded provincial aesthetic objectives for the General Chemical category for the following parameters: Sodium and Total dissolved Solids

Objectives apply to certain characteristics of or substances found in water for human consumptive or hygienic use. The presence of these substances will affect the acceptance of water by consumers and/or interfere with the practice of supplying good quality water. Compliance with drinking water aesthetic objectives is not mandatory as these objectives are in the range where they do not constitute a health hazards. The aesthetic objectives for several parameters (including hardness as CaCO₃ magnesium, sodium and total dissolved solids) consider regional differences in drinking water sources and quality.

More information on water quality and sample submission performance may be obtained from:
